

# PhishGuru Phishing Attack Simulation Service

## Assess vulnerability and teach employees not to click

### Phishing Your Employees: Criminals are Doing It Right Now

Every day new phishing emails are reaching your employees' inboxes and, as a security officer, you are constantly wondering when someone will click, or reply, and expose the company's network and intellectual property. What if you could send your employees phishing emails to train them, and what if every person who falls for the phishing email is immediately trained what not to do the next time?

PhishGuru®, a software-as-a-service product, is an easy-to-use tool that assesses and trains employees with simulated phishing emails. This creates a unique teachable moment when employees fall for the simulated attack and are open to learning. Just-in-time training explains what they did wrong and how to avoid it the next time. PhishGuru is not a penetration test, it's much more. It's a way to change behavior.

Reduce your susceptibility by up to 70%

### Capturing Valuable Security Posture Intelligence

Not only are employees being trained, but valuable data is being captured. The intelligence gathered from the mock attacks — such as which attacks your organization is most susceptible to, which people are vulnerable, what devices they were using, and how people have changed their behavior after just one mock attack — is available instantly. This intelligence can be used to understand your organization's security posture and assign targeted training to the people who need it most.

NEW!

Our multi-panel training references the specific mock phishing attack that you send, showing users point by point what they did wrong.

## Assess vulnerability and teach employees not to click

**NEW!**

### Customizable Emails and Training to Meet Your Unique Needs

- Send a phishing email from a number of templates or craft your own
- Select the training method that suits your organization in terms of style and content
- Create your own training from our templates using a simple WYSIWYG editor

**You can edit all content in our training to fit your unique needs.**

### The Wombat Security Training Platform

The PhishGuru service is just one of the security awareness tools available in the Wombat Security Training Platform that enables security professionals and administrators to assess employees, deliver training, track results, and improve their cyber security posture. Reporting capabilities in the Platform provide both aggregate and individual data to guide follow-up training programs and show improved results over time.

### Wombat Core Features and Benefits

- Engaging and interactive training increases end user participation
- Learning-science principles ensure users learn key concepts and retain content much longer
- Short training modules are focused and respectful of busy schedules
- Training modules based upon scientific research in cyber security and learning science
- Cost effective — likely to cost less than your current training
- SCORM compliant to enable integration with your Learning Management System (LMS)
- 508-compliant to support people with learning, visual, hearing and physical disabilities

### Assessment

- Phishing Attack Simulation

### Training

- Safe Browsing – **NEW**
- Security Beyond the Office – **NEW**
- Smartphone Security
- Social Network Safety
- Phishing Traps
- Social Engineering
- Mobility and Travel
- Malicious URL Training
- Password Security
- Email Security

### Reporting

- Completion Data
- Average Score
- Most Missed Items
- User Activity

**Combine PhishGuru with Wombat's anti-phishing training modules, for the most comprehensive anti-phishing training available today.**
